

Product Assessment

Tyndall Australian Share Wholesale Fund

Report data as at 31 May 2022
Rating issued on 30 Jun 2022

VIEWPOINT

The Fund, managed by Tyndall Asset Management (Tyndall), offers investors a value-style, long-only exposure to Australian equities. Zenith believes that the combination of an experienced investment team and a well-structured investment process presents an attractive offering for investors.

Tyndall Asset Management (Tyndall) is a wholly-owned subsidiary of Yarra Capital Management (Yarra), a Melbourne-based boutique fund manager that offers a broad range of active strategies spanning Australian equities and fixed income. In April 2021, Yarra completed the acquisition of Nikko Asset Management's (Nikko) Australian business, which included Tyndall (formerly Nikko Asset Management Australia). Nikko retained a 20% stake in Yarra. Yarra, Nikko and Tyndall share administrative support functions including capital, financial, systems and human resources, which we view positively, as it allows the investment team to focus on research and portfolio management efforts.

The Australian equities team of 11, led by Brad Potter, is located within Tyndall's Sydney-based office. Zenith considers Potter to be a high-quality investor, with the requisite expertise to lead the team. In addition, we believe the investment team is well resourced and highly incentivised through a profit share arrangement in the business unit.

The Fund is managed by Potter and Jason Kim under a 50/50 dual portfolio manager structure. Zenith believes Kim is a proficient investor, who has a strong track record managing the Tyndall Australian Share Concentrated Fund. Zenith rates both portfolio managers highly, based on their level of industry experience and performance track record to date.

Tyndall believes markets are inefficient and aims to exploit these inefficiencies through the application of its proprietary relative valuation framework, which incorporates a comprehensive assessment of company financials coupled with a rigorous visitation program.

A standard set of macroeconomic assumptions is employed in all models to ensure consistency throughout the process. These assumptions include currency, commodity and interest rate inputs. The research process culminates in the derivation of a three-year internal rate of return (IRR) for each stock. Zenith believes the stock selection process employed by the team is robust and in-depth, providing a strong input into the portfolio construction process.

The two portfolio managers construct separate sub-portfolios from a shortlist of stock opportunities that are ranked according to their respective IRRs. Potter and Kim aim to construct sub-portfolios of stocks with higher expected returns, in accordance with the Fund's risk constraints. In general, Zenith views dual portfolio manager structures to be a less efficient approach to portfolio management, as it can result in portfolios with a longer tail of small holdings and has the potential to result in opposing views being held within the Fund.

Zenith acknowledges that Potter and Kim leverage the same research when constructing their separate portfolios and, historically, a high level of commonality has been observed between the sub-portfolios. Overall, Zenith believes the Fund is managed in an effective manner, leveraging the insights generated by the experienced investment team.

FUND FACTS

- Expected to hold between 20 and 35 stocks
- Expected portfolio turnover between 30% p.a. and 70% p.a.
- Zenith has assigned the Fund a responsible investment classification of **Integrated**

APPLICATIONS OF INVESTMENT

SECTOR CHARACTERISTICS

The Zenith 'Australian Shares – Large Companies' sector consists of long-only strategies investing in the Australian equities asset class. The sector incorporates both benchmark aware and benchmark unaware strategies and focuses predominantly on stocks with large market capitalisations. The sector is one of the most competitive in the investment landscape, based on the number of managers and strategies available to investors. Despite the competitiveness of the sector, active management has historically added value, with the median active manager outperforming a passive index over the longer term.

Zenith benchmarks all funds in this sector against the S&P/ASX 300 Accumulation Index. However, many managers in this sector benchmark themselves against the S&P/ASX 200 Accumulation Index. Both indices are market-capitalisation weighted, resulting in companies with the largest market capitalisations receiving the largest weightings. Over the longer term, Zenith believes there will be minimal difference between the return profiles of these indices.

The Australian equities asset class, as represented by the S&P/ASX 300 Index, is highly concentrated and narrow. Zenith considers a company to be large cap if it falls within the S&P/ASX 50 Index, with companies falling within the S&P/ASX 51 to 100 considered mid cap. All stocks outside of the S&P/ASX 100 Index are considered small capitalisation stocks.

As at 31 March 2022, the Financials and Materials sectors combined represented a significant portion of the S&P/ASX 300 Accumulation Index, with the Financials sector accounting for approximately 28% and Materials approximately 26%. In addition, the top 10 stocks represented approximately 46% of the Index and the top 20 stocks represented approximately 56%.

PORTFOLIO APPLICATIONS

In general, compared to most other asset classes, equities offer investors the opportunity for higher capital growth over the longer term with some income. However, this higher growth is also often associated with higher volatility. Therefore, it is recommended that investors adopt a longer time frame when investing in equities.

Investors should also be cognisant of the fact that the Australian equity market is relatively concentrated, with the Materials and Financials sectors dominating the market. The market also only represents approximately 2% of global equity markets (in terms of market capitalisation). Therefore, to mitigate this concentration risk it is highly recommended that investors diversify their investments across asset classes, both domestically and globally.

Given the Fund's value bias, Zenith believes it would blend well with growth-orientated and/or style-neutral products to achieve a diversified exposure to the Australian equity sector.

As a relatively concentrated offering, the Fund is likely to exhibit a more volatile performance profile than other more diversified Australian equity offerings. In addition, with limited portfolio constraints and a generous overarching risk budget, it is feasible that the Fund's risk/return characteristics materially

deviate from its benchmark. Accordingly, Zenith believes the Fund is appropriate for investors with a higher risk tolerance who can bear greater levels of return dispersion for the potential of higher growth.

From a portfolio perspective, Zenith believes the Fund's concentrated nature makes it less suitable as a core allocation to this asset class. However, Zenith believes it is appropriate as a satellite or specialist allocation and may complement broader Australian equity exposures to achieve a more balanced set of investment outcomes.

The Fund's portfolio turnover is expected to be between 30% p.a. and 70% p.a., which Zenith considers to be moderate to high. Tyndall was not able to provide any insight on the proportion of expected turnover attributed to the resizing of existing positions and that which is due to initiating and closing positions. Given this expected level of turnover, a sizeable proportion of the Fund's returns are expected to be delivered via the realisation of capital gains in income distributions, rather than through capital appreciation in the unit price. In addition, realised capital gains are unlikely to be eligible for the capital gains tax discount, which can have a further negative impact on the after-tax outcomes for high tax rate paying investors. However, Zenith notes that Tyndall generally holds core positions for extended periods, which ensures eligibility for the capital gains tax discount. Holding all else equal, the Fund may be more appealing to investors who are nil/low tax rate payers or high marginal tax rate payers who invest through tax-effective vehicles such as a superannuation fund.

RISKS OF THE INVESTMENT

SECTOR RISKS

Funds within the 'Australian Shares – Large Companies' sector are exposed to the following broad risks:

MARKET & ECONOMIC RISK: As is the case with all long-only Australian equities funds, the biggest risk to performance is a sustained downturn across the Australian share market. In addition, changes in economic, social, technological or political conditions, as well as market sentiment, could also lead to negative fund performance. This risk can be significantly reduced by investors adhering to a Fund's prescribed investment time frame.

SPECIFIC SECURITY RISK: This is the risk associated with an individual security. The price of shares in a company may be affected by unexpected changes in that company's operations such as changes in management or the loss of a significant customer.

LIQUIDITY RISK: This is the risk that a security or asset cannot be traded quickly enough due to insufficient trading volumes in the market. When trading volumes are low, sellers can significantly impact the price of a security when attempting to quickly exit a material position.

STYLE BIAS RISK: Australian equity managers will either employ a growth, value or neutral (combination of value and growth) style approach to investing, with each style potentially conducive to certain market conditions. As with market risk, investors should adhere to the Fund's investment time frame to mitigate the impact of short-term market movements and style impact.

CAPACITY RISK: High levels of funds under management (FUM) can present additional challenges to an Australian equity manager, as high FUM has the potential to hamper the manager's ability to trade efficiently and/or be forced to disclose substantial shareholdings to the market (most common in smaller companies).

REGULATORY RISK: The ASIC Regulatory Guide 97 'Disclosing Fees and Costs in Product Disclosure Statements and Periodic Statements' came into effect on 1 October 2017 and seeks to establish a common framework for disclosing fees with respect to registered managed investment schemes issued to retail investors.

In November 2019, ASIC released its final recommendations, with proposed changes to be phased in from 30 September 2020, with all Funds required to be compliant by 30 September 2022.

In its current form, RG97 will not impact the actual costs (or after fee returns) on existing investments. Rather, the guide is focused on providing increased transparency with respect to the costs of management. Given this, it is feasible that under RG97, investors become more sensitive to the costs charged and seek lower cost alternatives, potentially leading to fund outflows.

FUND RISKS

Zenith has identified the following key risks of the Fund. Although Zenith believes the risks noted are all significant, we have listed them in order of importance. In addition, we have not intended to highlight all possible risks.

KEY PERSON RISK: As with most fund managers, key person risk needs to be considered. As such, we would consider the departure of Brad Potter or Jason Kim to be detrimental to the Fund, triggering an immediate reassessment of our rating. However, Zenith believes the dual portfolio manager structure and succession planning implemented by Tyndall largely mitigates this risk. In addition, Zenith acknowledges that all investment team members are well incentivised to remain with the firm, at least over the medium term, given their respective equity ownership stakes.

CAPACITY/LIQUIDITY RISK: Zenith believes that high levels of funds under management (FUM) can potentially inhibit Tyndall's ability to efficiently trade the portfolio, thereby limiting outperformance potential. As at 31 May 2022, Tyndall managed approximately \$A 9.2 billion across its various Australian equity strategies. Tyndall has indicated a capacity limit of 0.75% of the S&P/ASX 200 Accumulation Index (approximately \$A 16 billion, as at 31 May 2022). Although Zenith does not believe the Fund is currently impacted by capacity limitations, we will continue to monitor Tyndall closely to ensure that excessive FUM across its suite of Australian equity products does not impact the Fund's performance.

CONCENTRATION RISK: Zenith notes that the Fund is relatively concentrated, expected to hold between 20 and 35 stocks. Zenith believes that concentrated portfolios have a greater level of stock-specific risk and, as such, investors should be cognisant that the Fund may experience capital volatility in excess of a more diversified strategy and the benchmark. However, we note that the portfolio has historically been managed at the upper limit of its 20 to 35 stock range.

PORTFOLIO MANAGER FOCUS RISK: In addition to this Fund, Potter and Kim co-manage a CVA Plus strategy on behalf of an institutional client. While Zenith acknowledges that there is some overlap in holdings between the strategies, we believe that the portfolio managers' other commitments have the potential to draw focus away from this Fund.

INTEGRATION RISK: There are risks associated with the integration of Tyndall's Australian business within Yarra, including staff turnover, cost-cutting and/or product rationalisation in markets where competing strategies are managed. However, Tyndall is expected to maintain its autonomy.

QUALITATIVE DUE DILIGENCE

ORGANISATION

Tyndall Asset Management (Tyndall) is a wholly-owned subsidiary of Yarra Capital Management (Yarra), a Melbourne-based boutique fund manager that offers a broad range of active strategies spanning Australian equities and fixed income.

In April 2021, Yarra completed the acquisition of Nikko Asset Management's (Nikko) Australian business, which included Tyndall (formerly Nikko Asset Management Australia). Nikko retained a 20% stake in Yarra, which enables Nikko's global business to gain access to Yarra's investment products while Yarra assumes responsibility for the distribution of Nikko's global suite of products in the Australian market. Yarra is one of Australia's largest independently-owned Australian equities and fixed income managers, with approximately \$A 19.7 billion of funds under management as at 31 May 2022.

Yarra was established in 2017 following the management buyout of Goldman Sachs Asset Management's Australian-focused investment management business. Yarra, Nikko and Tyndall share administrative support functions including capital, financial, systems and human resources, which we view positively, as it allows the investment team to focus on research and portfolio management efforts.

Tyndall's Australian equities business is a 50/50 joint venture between Yarra and investment staff in the Australian equities team. All investment personnel in the Australian equities team have equity ownership.

As at 31 May 2022, Tyndall had funds under management (FUM) of approximately \$A 9.2 billion across its various Australian equity strategies. The Australian Share strategy accounted for approximately \$A 7.5 billion in FUM, including \$A 656 million in the Fund.

INVESTMENT PERSONNEL

Name	Title	Tenure
Brad Potter	Head of Australian Equities	20 Yr(s)
Tim Johnston	Deputy Head of Australian Equities	24 Yr(s)
Jason Kim	Portfolio Manager/Senior Analyst	21 Yr(s)

Tyndall's Australian equities team is located within its Sydney-

based office. Led by Brad Potter, who has been with Tyndall since 2002, the investment team consists of 11 investment professionals with an average of 21 years' industry experience. Zenith considers Potter to be a high-quality investor with the requisite expertise to lead the team.

Tyndall provides leadership training for a number of senior team members. Zenith believes this succession planning approach provides the investment team with a strong sense of stability and direction, and aids in mitigating key person risk. In addition, this approach provides portfolio management experience to highly-regarded internal candidates through a progressive multi-portfolio manager structure.

The Fund is managed by Potter and Jason Kim under a 50/50 dual portfolio manager structure. Kim joined Tyndall in 2000, having previously held positions in the Commonwealth Public Service and as a portfolio manager with Deutsche Funds Management. Zenith believes Kim is a proficient investor, who has a strong track record.

All funds in Tyndall's Australian equities business operate under a dual portfolio management structure. Tyndall transitioned to this model in July 2007 as a way of mitigating key person risk. In general, Zenith views dual portfolio manager structures to be a less efficient approach to portfolio management, as it can result in portfolios with a longer tail of small holdings and has the potential to result in opposing views being held within the Fund.

Tyndall's research structure is well defined, with each analyst responsible for approximately 15 to 20 stocks. Although analysts tend to specialise in a particular sector, the financials and resources sectors are covered by multiple analysts. The team also attempts to ensure that at least two analysts attend company visits and meetings to ensure a cross-check of views and assessments.

The team meets multiple times during the week to discuss research and portfolio construction matters. At the research meetings, the team discusses company news items and broader market conditions, and reviews analyst stock recommendation updates/changes. Weekly portfolio construction meetings are held to provide further peer review of all portfolio decisions and to ensure all portfolio managers are aware of any pertinent information.

The investment team has historically maintained a high level of stability, which we believe is due to the equity participation shared across the team that provides an alignment of interest with the business. In addition to equity participation, which can form a large component of remuneration, team members are paid a base salary as well as a bonus based on meeting certain performance targets.

Overall, Zenith considers the team to be well resourced and highly experienced. In particular, Zenith rates the portfolio management team of Potter and Kim highly. Furthermore, we believe the peer-review process ensures that a collegiate environment is fostered and is one of the core strengths of Tyndall's process.

INVESTMENT OBJECTIVE, PHILOSOPHY AND PROCESS

The Fund's investment objective is to outperform the S&P/ASX 200 Accumulation Index by more than 2.5% p.a. (before fees)

over rolling five-year periods. In addition, Tracking Error is expected to be 2% p.a. to 8% p.a., with the upper limit of 8% p.a. retained for exceptional circumstances.

Tyndall believes markets are inefficient and aims to exploit these inefficiencies through the application of its long-standing proprietary relative valuation process. Tyndall applies a rigorous fundamental process to determine a stock's internal rate of return (IRR), with the time horizon for stock valuation being three years. This is designed to encourage low portfolio turnover, consistent with the belief that a value philosophy is suited to a long-term investment horizon.

Tyndall believes that a company's intrinsic value is best evaluated by examining its assets and normalised earnings power, while assigning value to potential growth only in exceptional cases. Through buying companies trading significantly lower than their intrinsic value and employing sound risk management techniques, Tyndall believes it can enhance the risk/return trade-off associated with traditional value investing.

SECURITY SELECTION

Tyndall applies its proprietary relative valuation process, Comparative Value Analysis (CVA), across all of its Australian equity strategies. The process seeks to identify companies with sustainable medium-term earnings that are trading at a significant discount to intrinsic value.

The initial universe includes all stocks listed in the S&P/ASX 200 Index. A liquidity screen is applied based on the 90-day median daily turnover for each stock in the index. To be eligible, Tyndall must be able to enter/exit a position within this period, based on a notional 1% portfolio weighting, and not account for more than 30% of daily turnover. This results in a universe of approximately 150 stocks.

These stocks are then subject to an additional proprietary, multi-factor stock screen that ranks stocks by value, quality and combined scores. The multiple valuation metrics used to filter the investment universe include:

- One-year forward consensus price to earnings
- Enterprise value multiple
- Two qualitative metrics

After the application of the initial screens, Tyndall undertakes detailed fundamental research. This includes projections of a company's financial statements and key financial ratios. Tyndall prioritises companies with balance sheets and cash flows that can finance potential growth and returns to shareholders.

Through a fundamental research process, Tyndall derives a company's intrinsic value based on a number of standardised inputs. As part of Tyndall's discounted cashflow process, it models a 'franchise period' that is generally four to eight years and represents the period a company is expected to achieve abnormal growth. To ensure the validity of all valuations, analysts compare valuations across a range of metrics, including capitalisation of normalised earnings, discounted cash flows and, when appropriate, break-up valuations of companies.

A standard set of macroeconomic assumptions for commodity prices and currencies is employed in all models to ensure

consistency throughout the process. These assumptions include currency, commodity and interest rate inputs.

The team takes a view on key macroeconomic variables and consensus forecasts based on inputs from brokers and other external sources. Unless the team has divergent views, the model defaults to the consensus. Company models are updated and/or initiated when there is new information that is likely to change estimated returns on stocks or there are new stocks that appear attractive on Tyndall's value/quality screens.

Company contact forms an important component of the research process, and includes visits to suppliers, customers and competitors. The objective is to gain a better understanding of the operations of the company and the industry in which it operates. Company visits are undertaken to validate inputs into the company models, determine the strategic value of the assets and assess management.

The output of the CVA research process is the production of a three-year internal rate of return (IRR) calculation for each stock, updated in real-time. The stocks are then ranked based on IRR, with the highest IRR stocks generally being considered for portfolio inclusion. To ensure the consistency of assumptions, detection of errors and omissions, and validity of forecasts, all team members extensively review all research. Zenith believes Tyndall employs a robust peer-review process.

Zenith believes the stock selection process employed by the team is robust and in-depth, providing a strong input into the portfolio construction process.

PORTFOLIO CONSTRUCTION

Portfolio construction is the responsibility of Potter and Kim, who construct discrete portfolios that are then combined to form the Fund. Although ultimate discretion remains with the two portfolio managers, they must communicate any changes to the team. The portfolio managers generally select stocks with high IRRs whilst selling or avoiding stocks that have low IRRs.

To construct the Fund, the portfolio managers generate model portfolios, which are periodically optimised and assessed through the BARRA risk system. BARRA assesses the portfolio's efficiency and exposure to risk. While this optimisation process provides a guide for portfolio construction, the portfolio managers retain the flexibility to express their qualitative views in accordance with the Fund's risk constraints. The portfolio managers also consider factors such as volatility, stock concentration, sector risks and style risks.

The portfolio is monitored on a daily basis, with a number of events triggering a review of a portfolio position. These include:

- Changes to the IRR due to stock price changes
- Abnormal stock price movements
- A stock weighting deviates more than 30% from the model portfolio target
- A stock approaches its assessed fair value
- A new stock enters the top 20 stocks ranked by IRR
- Poor price or earnings performance of a stock
- New material information becomes available
- An analyst signalling a change in forecasts or valuation
- Capital raising, initial public offerings, merger and

acquisition activity

Tyndall's buy and sell decisions are only undertaken if the portfolio managers believe that a change will improve portfolio returns after transaction costs.

The Fund will generally hold between 20 and 35 stocks, with portfolio turnover expected to range between 30% p.a. and 70% p.a. Although the Fund is typically fully invested, it may retain up to 10% in cash. The team assesses any sector exposures that are beyond +/-8% relative to the index, and material deviations at the factor level (except for value, negative size and interest rate sensitivity).

The portfolio managers retain the discretion to invest up to 7.5% of the portfolio in stocks that do not meet the criteria of the CVA process, allowing stocks to be selected that may have high expected returns without strictly fitting within Tyndall's three-year time horizon. While the portfolio managers have this discretion, they must explain their logic to the team for peer review. Given Zenith's high opinion of the CVA process, we would prefer that the Fund's investment universe was limited to compliant stocks.

Overall, Zenith believes the Fund is managed in an effective manner, leveraging the insights generated by the experienced investment team.

RISK MANAGEMENT

Portfolio Constraints	Description
Security Numbers	20 to 35
Active Stock Weight (%)	-6% to 6%
Active Sector Weight (%)	-8% to 8%
Cash (%)	max: 10%
Tracking Error (% p.a.)	2% p.a. to 8% p.a. (Expected)
ESG Constraints - Excluded Sectors	N/A

The Fund is managed within the risk constraints in the table above.

Zenith believes that risk management is firmly ingrained in Tyndall's culture. As evident in the underlying CVA process, multiple valuation methodologies are employed when valuing stocks. To add a further layer of risk control, Zenith notes that Tyndall uses conservative inputs in its valuations. In addition, the peer-review process ensures that biases are mitigated and all positions are examined thoroughly.

While the portfolio managers utilise a number of tools to achieve an appropriate risk/return trade-off, judgement and analyst input are the primary determinants. BARRA analysis is utilised to ensure that the portfolio managers are cognisant of the risks in the portfolio, including unintended biases. Risk factors include volatility, leverage, industry, price/earnings momentum, value and size. If these exposures are deemed excessive, the portfolio may be adjusted to moderate the risk exposure.

Tyndall periodically conducts scenario analysis on the portfolio, referencing previous events that have been problematic for the market and for Tyndall. If the downside risk is too large, the

portfolio is again assessed and may be adjusted with additional sector, factor or stock constraints.

Overall, Zenith is comfortable with the risk management process employed by Tyndall.

Responsible Investment Approach

Tyndall has an established Responsible Investment Policy, last updated in 2020, that guides its investment decisions. In addition, Tyndall is a signatory of the United Nations-supported Principles for Responsible Investment (PRI), assigned the following ratings:

- Strategy and Governance: **A+**
- Listed Equity - Incorporation: **A+**
- Listed Equity - Active Ownership: **A**

While the portfolio has no specific exclusions, as outlined in the table above, Tyndall takes an active approach to environmental, social and governance (ESG) issues. ESG is evaluated as part of the team's fundamental analysis process and, where ESG issues are deemed to be significant, they can preclude a company as a potential investment. Zenith believes that this qualitative analysis of a company's operations is crucial on a forward basis, given that a company's performance with regards to ESG considerations is increasingly being reflected in the company's share price. Overall, Zenith is comfortable with Tyndall's approach to ESG.

From a classification scale of:

- Impact
- Thematic
- Integrated
- Aware
- Traditional

Zenith has assigned the Fund a responsible investment classification of **Integrated**.

INVESTMENT FEES

The sector average management cost (in the table below) is based on the average management cost of all flagship Australian Shares – Large Companies funds surveyed by Zenith.

The Fund charges a management cost of 0.80% p.a. with no performance fee.

Overall, Zenith believes the Fund's fee structure is fair, relative to peers, given its stated objectives. However, we believe that investors have not been sufficiently compensated by way of risk-adjusted performance given the fees paid over the past three years (ending 30 June 2021).

The Fund also applies a buy/sell spread of 0.25% on all applications and redemptions.

(The fees mentioned above are reflective of the flagship version only, fees may differ when the product is accessed through an alternate investment vehicle such as a platform.)

Fees Type	Fund	Sector Average (Wholesale Funds)
Management Cost	0.80% p.a.	0.73% p.a.

	Description

Monthly Histogram

Minimum and Maximum Returns (% p.a.)

Whilst considering the performance of the Fund, investors should note that it has been managed under various portfolio manager and management structures, with the current portfolio management structure having been in place since May 2014.

To ensure consistency, Zenith measures all Australian equities funds against the S&P/ASX 300 Accumulation Index. However, Tyndall benchmarks itself against the S&P/ASX 200 Accumulation Index. Over the long term, Zenith expects any difference in performance between these two indices to be nominal.

All commentary below is as at 31 May 2022.

The Fund's investment objective is to outperform the S&P/ASX 200 Accumulation Index by more than 2.5% p.a. (before fees) over rolling five-year periods. Although Tyndall has not achieved its investment objective over the medium to long term, it has generated returns above Zenith's assigned

benchmark since inception.

The Fund's risk (as measured by Standard Deviation) has been higher than that of Zenith's assigned benchmark over all assessed periods, which Zenith believes is expected, given the relatively concentrated nature of the Fund.

Risk/Return	Incpt.	5 yr	3 yr	1 yr
Information Ratio	0.08	-0.48	-0.04	0.84

All commentary below is as at 31 May 2022.

Zenith seeks to identify funds that can outperform in over 50% of months in all market conditions, as we believe this represents consistency of manager skill. Tyndall has achieved this outcome since inception.

Zenith believes a value-style bias would normally suggest a tendency to outperform in falling market conditions versus rising markets. However, this has not been the case with the Fund, which has typically performed better in rising markets since inception.

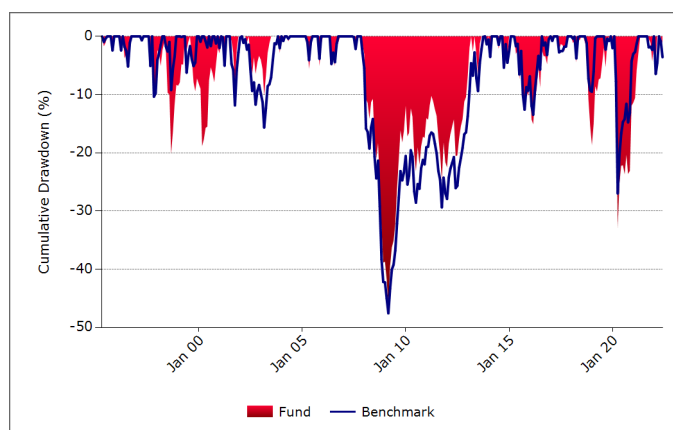

The Fund has maintained a Tracking Error within its expected range of 2% p.a. to 8% p.a. over all assessed periods.

DRAWDOWN ANALYSIS

Drawdown analysis assesses the relative riskiness of a Fund versus the benchmark, in reference to capital preservation. The maximum Drawdown is recorded as the percentage decline in the value of a portfolio from peak to trough (before a new peak is achieved). All Drawdown analysis is calculated commencing from the inception date of the Fund in question, and Drawdown analysis for the Fund and benchmark(s) are calculated independently. That is, the largest drawdown for the Fund and benchmark(s) will not always refer to the same time period.

Drawdown Analysis	Fund	Benchmark
Max Drawdown (%)	-46.12	-47.55
Months in Max Drawdown	16	16
Months to Recover	48	56

Worst Drawdowns	Fund	Benchmark
1	-46.12	-47.55
2	-32.88	-26.97
3	-20.19	-15.65
4	-18.87	-13.46
5	-18.68	-11.85

All commentary below is as at 31 May 2022.

The Fund's drawdown profile has been similar or more pronounced than the benchmark. Given the Fund's value and quality orientation, we would generally expect its drawdown profile to be less pronounced than the benchmark. As such, we are disappointed with this outcome.

INCOME/GROWTH ANALYSIS

Income / Growth Returns	Income	Growth	Total
FY to 30 Jun 2021	4.62%	28.87%	33.49%
FY to 30 Jun 2020	4.71%	-20.38%	-15.66%
FY to 30 Jun 2019	9.17%	-11.73%	-2.56%
FY to 30 Jun 2018	12.65%	-0.91%	11.74%
FY to 30 Jun 2017	6.55%	16.82%	23.37%
FY to 30 Jun 2016	3.50%	-5.06%	-1.56%
FY to 30 Jun 2015	3.72%	4.23%	7.95%
FY to 30 Jun 2014	3.75%	13.78%	17.53%
FY to 30 Jun 2013	4.53%	19.99%	24.52%
FY to 30 Jun 2012	4.34%	-12.19%	-7.85%

Investors should be aware that Tyndall does not target a specific level of income returns, with distributions made semi-annually where possible.

The Fund's portfolio turnover is expected to be between 30% p.a. and 70% p.a., which Zenith considers to be moderate to high. Tyndall was not able to provide any insight on the proportion of expected turnover attributed to the resizing of existing positions and that which is due to initiating and closing

positions. Given this expected level of turnover, a sizeable proportion of the Fund's returns are expected to be delivered via the realisation of capital gains in income distributions, rather than through capital appreciation in the unit price. In addition, realised capital gains are unlikely to be eligible for the capital gains tax discount, which can have a further negative impact on the after-tax outcomes for high tax rate paying investors. However, Zenith notes that Tyndall generally holds core positions for extended periods, which ensures eligibility for the capital gains tax discount. Holding all else equal, the Fund may be more appealing to investors who are nil/low tax rate payers or high marginal tax rate payers who invest through tax-effective vehicles such as a superannuation fund.
